Hi!

Sep 12th is almost here! Just 3 days to go. Here's your full briefing before you walk in.

Can't make it anymore? Please let us know as soon as possible. We have a waiting list, and with teams capped at 4, every confirmed spot matters, cancelling early lets us bring someone in off the waitlist and keep teams full.

Saturday, Sep 12th — Doors 9:00 AM, winners announced ~9:00 PM ET
eHub Collegetown, [409 College Ave, Ithaca, NY](#)

Your event page: Sign in with your email and OTP/email code. Your dashboard has everything.

Discord: Meet your fellow builders, receive updates, ask questions, and stay in the loop leading up to Sep 12th.

The build

No pre-built agents. Plans, scaffolds, and libraries are fine, but the agent gets built on the day. The required stack is NemoClaw + OpenClaw + OpenShell. All inference runs locally — your demo runs on the GB10 box on-site.

Bring the full NemoClaw + OpenClaw + OpenShell stack on a USB or external drive, along with your models. Installing and downloading on slow venue Wi-Fi can take 30–60 minutes — don't leave this to the morning.

Beyond the core stack: if you want to use a specific model or library, bring it on a flash drive — don't count on downloading it on the day. One option worth knowing about: NVIDIA just released Hermes, a new agent-optimized model you could build your playbook around → <https://build.nvidia.com/spark/hermes-agent>. Get it on your drive ahead of time. Same rule applies for anything else you want to use: if it's not in your hand before you walk in, don't assume it'll be available.

What to bring

- Your laptop — you develop on it, demo on the GB10 box.
- A power strip or extension cord — outlets per person will be limited.
- A USB drive with your full stack — see the Build section above for what to load on it.
- Appetite — food is covered.

Teams

Teams are 2–4 people, 40 teams hard cap. One Dell Pro Max with GB10 per team. If you registered solo or with a partial team, use your dashboard to find teammates, or we'll pair you. Confirm your roster on your dashboard before you arrive.

Every team submits their repo, video demo, and pitch deck in the first round of submissions. The top 8 teams pitch live for 5 minutes each (3 min demo, 2 min Q&A).

See you Saturday!
— The BuilderBase Team
